System Overview

Equipped with a 60 GHz radar chip and a 4MP wide-angle lens, the visual radar realizes all-weather and high-precision detection. The visual radar supports speed filtering, automatic calibration, changing live view protection zone into radar protection zone. With the intelligent algorithm, the visual radar achieves extremely low rate of false alarms and no missing alarms, which greatly improves the video quality in severe environment. The visual radar supports alarm linkage with sound and light, and integrates radar detection and video playback.

Functions
